

SECTION 9

Fabrications

There are occasions where a full pumping station may be required. In these instances we have the facility to design and build complete fabrications, including cutting, welding and threading pipework. In such cases we will assemble and construct all the required fittings and ensure that they fit the agreed criteria.

We will then dismantle and label the fabrication so that it can be quickly and easily crated, transported and erected on site.

Where appropriate we can offer our own installation supervision.
